Using PesaPesa

When the user opens the application for the first time, he can swipe through the initial screens to see more information regarding the application.

1st Sign in

On the first Sign In the user is required to have an active internet connection in order to synchronise his data.

After sign in there are 2 requirements for the user:

- 1. Confirm his email account
- 2. Complete his Facial and Identity card verification

Before the user can sign in he has to create a PesaPesa account. This can be done by taping the "Create Account" button.

The "Create Account" action cannot be done offline.

Container types

In the application the user has 2 types of currency accounts, or containers:

1. Phone containers.

This type of containers are securely stored on the user phone. They are used to make offline transaction via a QR Code protocol. The user can move credits from a wallet container. The user is responsible for this credits, since they be lost if the user loses his phone or delete the application files

2. Wallet containers

This type of containers are stored on PesaPesa servers. The user can add credits to this container via a bank transfer or from a Phone container.

The containers are always in pair, for every currency.

Wallet	
6	Wallet Gambia (GMD)
6	Wallet Euro (EUR)

Transaction types

PesaPesa has 3 type of transactions:

1.QR Transactions

This type of transaction are done via the QR Protocol. They are done offline using credits available in the Phone containers of the users.

2. Wallet Transactions

This types of transactions are done online, between Wallet containers of the users. Users can make direct transfers to one another by using the transfer page.

3. Bank Transaction

This are transactions done between a Wallet container and a bank. The user can securely add credits from a bank account and send money to his bank account.

Request and Scan Page

Available in offline mode

On the request page, you(requester) can request credits from another user(sender). For this action, the app doesn't, require an internet connection because it takes place via the Qr Code Protocol, from one phone container to another phone container. After pressing "Request" the app will start the request flow.

By pressing the Scan button, the sender will start the scan flow, by presenting his Qr Code.

Request Flow

4. Requester scan the confirmation code

Wallet Page

Available in Offline Mode

Information available:

- 1. Amount of credits in Wallet Container
- 2. Amount of credits in Phone Container
- 3. History of transactions from the Wallet Container
- 4. Last time this information was updated

If internet connection is available, the user can:

- 1. Add money to container
- 2. Withdraw money from container

Exchange Page

Not available in offline mode

Users can exchange one currencies to another. PesaPesa uses the latest exchange market, only perceiving a small converting fee.

This feature is available only if the user has an active internet connection, allowing us to provide an up to date exchange rates to the user.

Transfers Page

Not available in offline mode

In addition to offline transactions, PesaPesa allows users to transfer money online, without the need to scan Qr codes.

On this screen, the user can see all his accounts and contacts. After each transaction, the other user is added to your contact list. This way, you can see all the people who sent or received credits for you.

Tapping a contact will show your transaction history with that user. It also allows you to make a new transaction by requesting or sending credits.

Contacts can also be added manually, by pressing the "+" button.
